#### Abstract

In this paper, we investigate the Gauss equation and curvature tensor in the dual space $D^{n}=\left\{\bar{X} \mid \bar{X}=x_{i}+\eta x_{i}^{*}, x_{i}, x_{i}^{*} \in R^{n}\right\}$. We obtain Gauss formula in $D^{n}$ and show that the curvature tensor of $D^{n}$ would be zero.

## 1. Introduction

In the real $n$-dimensional space $R^{n}$, lines combined with one of their two directions can be represented by unit dual vectors over the ring of dual numbers. The properties of real vector analysis are valid for the dual vectors also if $d$ and $d^{*}$ are real numbers, then the combination

$$
\begin{equation*}
D=d+\eta d^{*} \tag{1.1}
\end{equation*}
$$

is called a dual number and the symbol $\eta$ denotes the dual unit with the property that $\eta \cdot \eta=(0,1)(0,1)=\eta^{2}=0$. In analogy of the complex numbers, Clifford has

2000 Mathematics Subject Classification: 53C50.
Keywords and phrases: dual number, dual space, covariant derivative.

## A. TALESHIAN

defined the dual numbers and shown them to form an algebra which is not a field $[1,5]$. The pure dual numbers are $\eta a^{*}$. Corresponding to this definition, pure dual numbers $\eta d^{*}$ are zero divisors. The number $\eta d^{*}$ has no inverse in algebra, as a consequence $i^{2}=-1[1,4]$. In this article, we investigate further Gauss formula and curvature tensor on the dual space $D^{n}$. In Section 2, basic definitions are given and Section 3 deals with the investigation of Gauss equation and curvature tensor of $D^{n}$.

## 2. Preliminaries

The set $D$ is defined by

$$
\begin{equation*}
D=\bar{x}=x+\eta x^{*} \tag{2.1}
\end{equation*}
$$

and these dual numbers form a commutative ring with respect to the following operations. For $\bar{x}, \bar{y} \in D^{n}$, we have

$$
\begin{align*}
& \bar{x}=\left(x_{1}+\eta x_{1}^{*}, \ldots, x_{n}+\eta x_{n}^{*}\right),  \tag{2.2}\\
& \bar{y}=\left(y_{1}+\eta y_{1}^{*}, \ldots, y_{n}+\eta y_{n}^{*}\right) \tag{2.3}
\end{align*}
$$

(1)

$$
\begin{aligned}
\bar{x}+\bar{y} & =\left(\left(x_{1}+\eta x_{1}^{*}, \ldots, x_{n}+\eta x_{n}^{*}\right)+\left(y_{1}+\eta y_{1}^{*}, \ldots, y_{n}+\eta y_{n}^{*}\right)\right) \\
& =\left(\left(x_{1}+y_{1}, \ldots, x_{n}+y_{n}\right)+\eta\left(x_{1}^{*}+y_{1}^{*}, \ldots, x_{n}^{*}+y_{n}^{*}\right)\right)
\end{aligned}
$$

(2)

$$
\begin{aligned}
\bar{x} \cdot \bar{y} & =\left(x_{1}+\eta x_{1}^{*}, \ldots, x_{n}+\eta x_{n}^{*}\right) \cdot\left(y_{1}+\eta y_{1}^{*}, \ldots, y_{n}+\eta y_{n}^{*}\right) \\
& =\left\{x_{1} y_{1}+\eta\left(x_{1} y_{1}^{*}+x_{1}^{*} y_{1}\right), \ldots, x_{n} y_{n}+\eta\left(x_{n} y_{n}^{*}+y_{n} x_{n}^{*}\right)\right\} .
\end{aligned}
$$

(3) The division $\bar{x} / \bar{y}$ exists if $\bar{y} \neq 0 \quad\left(y \neq 0, y^{*} \neq 0\right)$. We define the division $\bar{x} / \bar{y}$ such that

$$
\begin{equation*}
\frac{\bar{x}}{\bar{y}}=\frac{x_{1}+\eta x_{1}^{*}, \ldots, x_{n}+\eta x_{1}^{*}}{y_{1}+\eta y_{1}^{*}, \ldots, y_{n}+\eta y_{n}^{*}} \tag{2.4}
\end{equation*}
$$

and see that

$$
\begin{gather*}
\frac{\bar{x}}{\bar{y}}=\frac{x_{1}}{y_{1}}+\eta \frac{x_{1}^{*} y_{1}-y_{1}^{*} x_{1}}{y_{1}^{2}}, \ldots, \frac{x_{n}}{y_{n}}+\eta \frac{x_{n}^{*} y_{n}-y_{n}^{*} x_{n}}{y_{n}^{2}} .  \tag{2.5}\\
D^{n}=\left\{\bar{x} \mid \bar{x}=\left(x_{1}+\eta x_{1}^{*}, \ldots, x_{n}+\eta x_{n}^{*}\right)\right\} \tag{2.6}
\end{gather*}
$$

is a module over the ring $D$. It is clear that each of dual vector $\bar{x}$ in $D^{n}$ consists of any two real vectors $x$ and $x^{*}$, which are expressed in the orthonormal frame in the $n$-dimensional Euclidean space $R^{n}$. We call the elements of $D^{n}$ to be the dual vectors. If $\bar{x} \neq 0 \quad\left(x \neq 0, x^{*} \neq 0\right)$, then the norm of $\bar{x}$ is defined by $\|\bar{x}\|=$ $\sqrt{\langle\bar{x}, \bar{x}\rangle}$. It may be recalled that $\nabla^{*}$ is a derivative operator and acts like $\nabla$. So $\nabla\left(x^{*} y^{*}\right)=y^{* 2}+2 x^{*} y^{*}$ and also $\nabla^{*}\left(x^{*} y^{* 2}\right)=y^{* 2}+2 x^{*} y^{*}$. Finally, we have $\nabla^{*\left(x y^{2}\right)}=y^{2}+2 x y$. We know that an $(n-1)$-submanifold is called a hypersurface [4], and an $(n-1)$-dual submanifold is called a dual hypersurface.

## 3. Main Results

Definition 3.1. Let $M$ be a hypersurface of $R^{n}$ and $\bar{\nabla}$ be the natural connection on $R^{n}$. Suppose $N$ is a unit normal vector field that is $C^{\infty}$ on $M$, and let $S(X)=\bar{\nabla}_{X} N$ be $X$ tangent to $M$. If $Y$ is a $C^{\infty}$ vector field about $p$ in $M$, and $X$ in $M_{p}$, then define $\nabla_{X} Y$ by

$$
\begin{equation*}
\bar{\nabla}_{X} Y=\nabla_{X} Y+\langle S(X), Y\rangle N \tag{3.1}
\end{equation*}
$$

is a Gauss equation [4].
Definition 3.2. Let $X, Y$ and $Z$ be $C^{\infty}$ vector fields on an open set $A$ in $R^{n}$ and $R$ be curvature tensor of $R^{n}$. Define $R(X, Y) Z$ by

$$
\begin{equation*}
R(X, Y) Z=\nabla_{X}\left(\nabla_{Y} Z\right)-\nabla_{Y}\left(\nabla_{X} Z\right)-\nabla_{[X, Y]} Z=0 \tag{3.2}
\end{equation*}
$$

This is called curvature tensor of $R^{n}$. Now, we introduce the dual vector fields $\bar{X}$, $\bar{Y}$ and $\bar{Z}$ such that $\bar{X}, \bar{Y}, \bar{Z} \in \chi\left(D^{n}\right)$, where $\chi\left(D^{n}\right)$ is the space of all vector
fields on $D^{n}$. Utilising the Gauss equation and curvature tensor for $\bar{X}, \bar{Y}, \bar{Z} \in \chi\left(D^{n}\right)$, we give the following theorems.

Theorem 3.3. Let $\bar{M}$ be dual hypersurface in $D^{n}$ and $S$ be Weingarten map on $\bar{M}$. If $\nabla^{\prime}=\nabla+\eta \nabla^{*}$ is covariant derivative in $D^{n}$ and $\bar{\nabla}$ is covariant derivative on $\bar{M}$, then the Gauss equation given by

$$
\begin{aligned}
\bar{\nabla}_{\bar{X}} \bar{Y}= & \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{1}\right)+\eta\left(x_{i}\left(\nabla y_{1}^{*}+\nabla^{*} y_{1}\right)+\nabla y_{1}\left(x_{i}^{*}\right)\right)\right), \ldots \\
& \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{n}\right)+\eta\left(x_{i}\left(\nabla y_{n}^{*}+\nabla^{*} y_{n}\right)+\nabla y_{n}\left(x_{i}^{*}\right)\right)\right) \\
& +\sum_{i=1}^{n}\left(k_{i} x_{i} y_{i} a_{i}+\eta\left(k_{i}^{*} x_{i} y_{i} a_{i}+x_{i}^{*} k_{i} y_{i} a_{i}\right)\right)
\end{aligned}
$$

Proof. Let $\bar{X}=\left(\bar{x}_{1}, \ldots, \bar{x}_{n}\right)$ such that $\bar{x}_{1}=x_{1}+\eta x_{1}^{*}, \ldots, \bar{x}_{n}=x_{n}+\eta x_{n}^{*}$ and $\bar{Y}=\left(\bar{y}_{1}, \ldots, \bar{y}_{n}\right)$ so that $\bar{y}_{1}=y_{1}+\eta y_{1}^{*}, \ldots, \bar{y}_{n}=y_{n}+\eta y_{n}^{*}$ and we denote the inner product by $\langle$,$\rangle . Then$

$$
\begin{equation*}
\bar{\nabla}_{\bar{X}} \bar{Y}=\nabla^{\prime} \bar{X} \bar{Y}+\langle S(\bar{X}), \bar{Y}\rangle \bar{N} \tag{3.3}
\end{equation*}
$$

$$
\begin{aligned}
\nabla_{\bar{X}}^{\prime} \bar{Y}= & \left(\nabla+\eta \nabla^{*}\right)_{\bar{X}} \bar{Y} \\
= & \left(\left\langle\bar{X},\left(\nabla+\eta \nabla^{*}\right) \bar{y}_{1}\right\rangle, \ldots,\left\langle\bar{X},\left(\nabla+\eta \nabla^{*}\right) \bar{y}_{n}\right\rangle\right) \\
= & \left\langle\bar{X},\left(\nabla+\eta \nabla^{*}\right)\left(y_{1}+\eta y_{1}^{*}\right)\right\rangle, \ldots,\left\langle\bar{X},\left(\nabla+\eta \nabla^{*}\right)\left(y_{n}+\eta y_{n}^{*}\right)\right\rangle \\
= & \left\{\left\langle\left(x_{i}+\eta x_{i}\right),\left(\nabla+\eta \nabla^{*}\right)\left(y_{1}+\eta y_{1}^{*}\right)\right\rangle, \ldots,\left\langle\left(x_{i}+\eta x_{i}\right),\left(\nabla+\eta \nabla^{*}\right)\left(y_{n}+\eta y_{n}^{*}\right)\right\rangle\right\} \\
= & \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{1}\right)+\eta\left(x_{i}\left(\nabla y_{1}^{*}+\nabla^{*} y_{1}\right)+\nabla y_{1}\left(x_{i}^{*}\right)\right)\right), \ldots \\
& \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{n}\right)+\eta\left(x_{i}\left(\nabla y_{n}^{*}+\nabla^{*} y_{n}\right)+\nabla y_{n}\left(x_{i}^{*}\right)\right)\right) .
\end{aligned}
$$

We know that $\bar{X}$ is a principal vector and $S$ is a Weingarten map. So that

$$
S(\bar{X})=\bar{k} \bar{x}, \quad S(\bar{X})=\sum_{i=1}^{n} \bar{k}_{i} \bar{x}_{i} X_{i}, \quad x_{i} \in C^{\infty}(\bar{M}, R)
$$

$$
\begin{aligned}
& \bar{k}_{i}=k_{i}+\eta k_{i}^{*}, \quad \bar{x}_{i}=x_{i}+\eta x_{i}^{*}, \quad \bar{k}_{i} \bar{x}_{i}=k_{i} x_{i}+\eta\left(k_{i}^{*} x_{i}+x_{i}^{*} k_{i}\right), \\
& \bar{Y}=\left(\bar{y}_{1}, \ldots, \bar{y}_{n}\right)=\left(y_{1}+\eta y_{1}^{*}, \ldots, y_{n}+\eta y_{n}^{*}\right) .
\end{aligned}
$$

To see this $\langle S(\bar{X}), \bar{Y}\rangle \bar{N}$, first we find $\langle S(\bar{X}), \bar{Y}\rangle$. So

$$
\langle S(\bar{X}), \bar{Y}\rangle=\left(k_{i} x_{i}+\eta\left(k_{i}^{*} x_{i}+x_{i}^{*} k_{i}\right)\right)\left(y_{i}+\eta y_{i}^{*}\right)=k_{i} x_{i} y_{i}+\eta\left(k_{i}^{*} x_{i} y_{i}+x_{i}^{*} k_{i} y_{i}\right)
$$

and $\bar{N}=a_{i}+\eta a_{i}^{*}$,

$$
\begin{aligned}
\langle S(\bar{X}), \bar{Y}\rangle \bar{N} & =\left(k_{i} x_{i} y_{i}+\eta\left(k_{i}^{*} x_{i} y_{i}+x_{i}^{*} k_{i} y_{i}\right)\right)\left(a_{i}+\eta a_{i}^{*}\right) \\
& =k_{i} x_{i} y_{i} a_{i}+\eta\left(k_{i}^{*} x_{i} y_{i} a_{i}+x_{i}^{*} k_{i} y_{i} a_{i}\right) \\
& =\sum_{i=1}^{n}\left(k_{i} x_{i} y_{i} a_{i}+\eta\left(k_{i}^{*} x_{i} y_{i} a_{i}+x_{i}^{*} k_{i} y_{i} a_{i}\right)\right) .
\end{aligned}
$$

Finally

$$
\begin{aligned}
\bar{\nabla}_{\bar{X}} \bar{Y}= & \nabla^{\prime} \overline{\bar{X}} \bar{Y}+\langle S(\bar{X}), \bar{Y}\rangle \bar{N} \\
= & \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{1}\right)+\eta\left(x_{i}\left(\nabla y_{i}^{*}+\nabla^{*} y_{1}\right)+\nabla y_{1}\left(x_{i}^{*}\right)\right)\right), \ldots, \\
& \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{n}\right)+\eta\left(x_{i}\left(\nabla y_{n}^{*}+\nabla^{*} y_{n}\right)+\nabla y_{n}\left(x_{i}^{*}\right)\right)\right) \\
& +\sum_{i=1}^{n}\left(k_{i} x_{i} y_{i} a_{i}+\eta\left(k_{i}^{*} x_{i} y_{i} a_{i}+x_{i}^{*} k_{i} y_{i} a_{i}\right)\right)
\end{aligned}
$$

Theorem 3.4. Let $D^{n}$ be a dual space and $\bar{X}, \bar{Y}, \bar{Z}$ be dual vector fields on the $D^{n}$. Let $R$ be a curvature tensor of $D^{n}$ and $\bar{\nabla}=\nabla+\eta \nabla^{*}$ be a dual covariant derivative (connection) on $D^{n}$. Then

$$
\begin{equation*}
R(\bar{X}, \bar{Y}) \bar{Z}=\bar{\nabla}_{\bar{X}}\left(\bar{\nabla}_{\bar{Y}} \bar{Z}\right)-\bar{\nabla}_{\bar{Y}}\left(\bar{\nabla}_{\bar{X}} \bar{Z}\right)-\bar{\nabla}_{[\bar{X}, \bar{Y}]} \bar{Z}=0 \tag{3.4}
\end{equation*}
$$

## Proof.

$$
\begin{aligned}
\bar{\nabla}_{\bar{X}} \bar{Y}= & \sum_{i=1}^{n}\left(y_{i}\left(\nabla z_{1}\right)+\eta\left(y_{i}\left(\nabla z_{1}^{*}+\nabla^{*} z_{1}\right)+\nabla z_{1}\left(y_{i}^{*}\right)\right)\right), \ldots, \\
& \sum_{i=1}^{n}\left(y_{i}\left(\nabla z_{n}\right)+\eta\left(y_{i}\left(\nabla z_{n}^{*}+\nabla^{*} z_{n}\right)+\nabla z_{n}\left(y_{i}^{*}\right)\right)\right),
\end{aligned}
$$

## A. TALESHIAN

$$
\begin{align*}
\bar{\nabla}_{\bar{X}}\left(\bar{\nabla}_{\bar{Y}} \bar{Z}\right)= & \left(x_{i}+\eta x_{i}^{*}\right)\left(\nabla+\eta \nabla^{*}\right)\left(\bar{\nabla}_{\bar{Y}} \bar{Z}\right) \\
= & \sum_{i=1}^{n}\left(x_{i}+\eta x_{i}^{*}\right)\left\{\nabla y_{i}\left(\nabla z_{1}\right)+\eta\left(\nabla y_{i}\left(\nabla z_{1}^{*}+\nabla^{*} z_{1}\right)+\nabla^{2} z_{1}\left(y_{i}^{*}\right)\right)\right. \\
& \left.+\eta \nabla^{*}\left(\nabla y_{i}\right)\left(\nabla z_{1}\right)\right\}, \ldots, \\
& \sum_{i=1}^{n}\left(x_{i}+\eta x_{i}^{*}\right)\left\{\nabla y_{i}\left(\nabla z_{n}\right)+\eta\left(\nabla y_{i}\left(\nabla z_{n}^{*}+\nabla^{*} z_{n}\right)+\nabla^{2} z_{n}\left(y_{i}^{*}\right)\right)\right. \\
& \left.+\eta \nabla^{*}\left(\nabla y_{i}\right)\left(\nabla z_{n}\right)\right\} \\
= & \sum_{i=1}^{n}\left\{x_{i}\left(\nabla y_{i}\right)\left(\nabla z_{1}\right)+\eta\left(x_{i}\left(\nabla y_{i}\right)\left(\nabla z_{1}^{*}+\nabla^{*} z_{1}\right)+x_{i}\left(\nabla^{2} z_{1}\right)\left(y_{i}^{*}\right)\right)\right. \\
& \left.\quad+\eta x_{i}^{*} \nabla^{*}\left(\nabla y_{i}\right)\left(\nabla z_{1}\right)\right\}, \ldots, \\
& \sum_{i=1}^{n}\left\{x_{i}\left(\nabla y_{i}\right)\left(\nabla z_{n}\right)+\eta\left(x_{i}\left(\nabla y_{i}\right)\left(\nabla z_{n}^{*}+\nabla^{*} z_{n}\right)+x_{i}\left(\nabla^{2} z_{n}\right)+\left(y_{i}^{*}\right)\right)\right. \\
& \left.+\eta x_{i}^{*} \nabla^{*}\left(\nabla y_{i}\right)\left(\nabla z_{n}\right)\right\} . \tag{3.5}
\end{align*}
$$

On the other hand, we have

$$
\begin{align*}
& \bar{\nabla}_{\bar{Y}}\left(\bar{\nabla}_{\bar{X}} \bar{Z}\right) \\
= & \sum_{i=1}^{n}\left\{y_{i}\left(\nabla x_{i}\right)\left(\nabla z_{1}\right)+\nabla\left[y_{i}\left(\nabla x_{i}\right)\left(\nabla z_{1}^{*}+\nabla^{*} z_{1}\right)+y_{i}\left(\nabla^{2} z_{1}\right)\left(x_{i}^{*}\right)+y_{i}^{*} \nabla^{*}\left(\nabla x_{i}\right)\left(\nabla z_{1}\right)\right]\right\}, \ldots, \\
& \sum_{i=1}^{n}\left\{y_{i}\left(\nabla x_{i}\right)\left(\nabla z_{n}\right)+\nabla\left[y_{i}\left(\nabla x_{i}\right)\left(\nabla z_{n}^{*}+\nabla^{*} z_{n}\right)+y_{i}\left(\nabla^{2} z_{n}\right)\left(x_{i}^{*}\right)+y_{i}^{*} \nabla^{*}\left(\nabla x_{i}\right)\left(\nabla z_{n}\right)\right]\right\} . \tag{3.6}
\end{align*}
$$

We know that

$$
\begin{equation*}
\bar{\nabla}_{[\bar{X}, \bar{Y}]} \bar{Z}=\nabla_{[\bar{X}, \bar{Y}]} \bar{Z}+\eta \nabla_{[\bar{X}, \bar{Y}]}^{*} \bar{Z} \tag{3.7}
\end{equation*}
$$

or

$$
\begin{aligned}
& \bar{\nabla}_{[\bar{X}, \bar{Y}]} \bar{Z}=\left(\bar{\nabla}_{\bar{X}} \bar{Y}-\bar{\nabla}_{\bar{Y}} \bar{X}\right)\left(\nabla+\eta \nabla^{*}\right)\left(z_{i}+\eta z_{i}^{*}\right) \\
& \bar{\nabla}_{\bar{X}} \bar{Y}= \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{1}\right)+\eta\left(\nabla y_{1}^{*}+\nabla^{*} y_{1}\right)+\nabla y_{1}\left(x_{i}^{*}\right)\right), \ldots \\
& \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{n}\right)+\eta\left(\nabla y_{n}^{*}+\nabla^{*} y_{n}\right)+\nabla y_{n}\left(x_{i}^{*}\right)\right)
\end{aligned}
$$

$$
\begin{gathered}
\bar{\nabla}_{\bar{Y}} \bar{X}=\sum_{i=1}^{n}\left(y_{i}\left(\nabla x_{1}\right)+\eta\left(\nabla x_{1}^{*}+\nabla^{*} x_{1}\right)+\nabla x_{1}\left(y_{i}^{*}\right)\right), \ldots \\
\sum_{i=1}^{n}\left(y_{i}\left(\nabla x_{n}\right)+\eta\left(\nabla x_{n}^{*}+\nabla^{*} x_{n}\right)+\nabla x_{n}\left(y_{i}^{*}\right)\right) \\
\left(\nabla+\eta \nabla^{*}\right)\left(z_{i}+\eta z_{i}^{*}\right)=\nabla z_{i}+\eta\left(\nabla z_{i}^{*}+\nabla^{*} z_{i}\right) \\
=\left(\nabla+\eta \nabla^{*}\right)\left(z_{1}+\eta z_{1}^{*}, \ldots, z_{n}+\eta z_{n}^{*}\right)
\end{gathered}
$$

Using above relations, we get

$$
\begin{aligned}
& \left(\bar{\nabla}_{\bar{X}} \bar{Y}\right)\left(\nabla z_{i}+\eta\left(\nabla z_{i}^{*}+\nabla^{*} z_{i}\right)\right) \\
= & \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{1}\right)+\eta\left(x_{i}\left(\nabla y_{1}^{*}+\nabla^{*} y_{1}\right)+\nabla y_{1}\left(x_{i}^{*}\right)\right)\right)\left(\nabla z_{i}+\eta\left(\nabla Z_{i}^{*}+\nabla^{*} z_{i}\right)\right), \ldots \\
& \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{n}\right)+\eta\left(x_{i}\left(\nabla y_{n}^{*}+\nabla^{*} y_{n}\right)+\nabla y_{n}\left(x_{i}^{*}\right)\right)\right)\left(\nabla z_{i}+\eta\left(\nabla Z_{i}^{*}+\nabla^{*} z_{i}\right)\right) \\
& \times \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{1}\right)\left(\nabla z_{1}\right)+\eta\left[x_{i}\left(\nabla y_{1}\left(\nabla z_{1}^{*}+\nabla^{*} z_{1}\right)+\left(\nabla y_{1}^{*}+\nabla^{*} y_{1}\right)+\nabla y_{1}\left(x_{i}^{*}\right)\right)\right]\right), \ldots \\
& \sum_{i=1}^{n}\left(x_{i}\left(\nabla y_{n}\right)\left(\nabla z_{n}\right)+\eta\left[x_{i}\left(\nabla y_{n}\left(\nabla z_{n}^{*}+\nabla^{*} z_{n}\right)+\left(\nabla y_{n}^{*}+\nabla^{*} y_{n}\right)+\nabla y_{n}\left(x_{i}^{*}\right)\right)\right]\right)
\end{aligned}
$$

Also using same manner, we have

$$
\begin{align*}
& \left(\bar{\nabla}_{\bar{y}} \bar{z}\right)\left(\nabla z_{1}+\eta\left(\nabla z_{i}^{*}+\nabla^{*} z_{i}\right)\right) \\
= & \sum_{i=1}^{n}\left(y_{i}\left(\nabla x_{1}\right)\left(\nabla z_{1}\right)+\eta\left[y_{i}\left(\nabla x_{1}\left(\nabla z_{1}^{*}+\nabla^{*} z_{1}\right)+\left(\nabla x_{1}^{*}+\nabla^{*} x_{1}\right)+\nabla x_{1}\left(y_{i}\right)\right)\right]\right), \ldots \\
& \sum_{i=1}^{n}\left(y_{i}\left(\nabla x_{n}\right)\left(\nabla z_{n}\right)+\eta\left[y_{i}\left(\nabla x_{n}\left(\nabla z_{n}^{*}+\nabla^{*} z_{n}\right)+\left(\nabla x_{n}^{*}+\nabla^{*} x_{n}\right)+\nabla x_{n}\left(y_{i}\right)\right)\right]\right) \tag{3.8}
\end{align*}
$$

Substituting equations (12), (13) and (14) in equation (11), we obtain the following relation

$$
R(\bar{X}, \bar{Y}) \bar{Z}=0
$$

## Acknowledgement

The author would like to express his gratitude to Dr. Pourdarvish for valuable discussions and suggesting some modification in the presentation of the paper.
